LEAN AND AGILE MANAGEMENT

Currently, the list of companies from different sectors (not only related to the automotive industry) that have been attracted by Lean and Agile Management has increased as the benefits of these techniques are known (and proved) by those who trust them.

Implementing this methodology without assistance is a long and complex process since it involves applying specific tools, but also a cultural change process that has to be led and managed and that affects people to a great extent. Therefore, it is necessary to have an expert who can walk companies throughout this process.

At P&A, we have vast experience in the field of Lean and Agile tool and culture implementation in companies from different sectors. Our experts have great experience in internal and external implementation, with excellent results.

The following advantages have been highlighted by our clients after implementing the Lean methodology:

- Reducing production costs
- Reducing inventories
- Reducing labor costs
- Reducing deadlines
- Optimizing logistics and transportation costs
- Improving quality
- Reducing waste
- Reducing overproduction

CUSTOMIZATION

All consulting programs are customizable to the needs, competency models, culture and preferences of each company.

PARTICIPANT’S PROFILE

The consulting programs are aimed at companies of all sizes and all sectors.
LANGUAGES

All our consulting programs can be carried out in Spanish, English, French and Portuguese.
